

Carson Jenkins, mkq7uv

The screenshot displays a microcontroller development environment with the following components:

- Registers:** A table showing the state of 16 registers (R0-R15) for a 'Core'. R0 is 0x00000461, R1 is 0x20000408, and R2 through R12 are 0x00000000. R13 is 0x20000408, R14 is 0x000002B9, and R15 is 0x00000460.
- Disassembly:** Shows assembly instructions at addresses 34 and 35. Address 34: `PLL_Init(Bus80MHz);` // initialize bus frequ. Address 35: `Output_Init();` // initialize output de.
- Main.c:** Source code for the main function. It includes `PLL.h` and `UART.h`. The `main` function calls `PLL_Init(Bus80MHz);`, `Output_Init();`, and enters a `while(1)` loop printing "HelloWorld: Carson Jenkins\n".
- Command:** Shows the command `Running with Code Size Limit: 32K` and the load path `Load "C:\\Users\\cjjen\\OneDrive\\Documents\\"`.
- UART #1:** A window showing the output of the UART, displaying "HelloWorld: Carson Jenkins" multiple times.
- Simulation:** The bottom status bar indicates the simulation is running.

(I forgot to take a screenshot when I did it the first time)
